Art Unit: 3712

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24 and 31-39, drawn to a computer based learning system and method for learning, classified in class 434, subclass 156,
- II. Claims 25-30 and 40-43 , drawn to a voice recognition system, classified in class 704, subclass 246.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed. In the independent claims of group I, the subcombination element is referred to as "speech recognition means" while the claims of the subcombination require the details of a database and means for comparing data to the database. The subcombination has separate utility such as applications in telephony or security.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
